

FUNCTIONS

i = a;

int b;

int c;

$a \times \text{node}_a^2 + b \times \text{node}_b + c \times \text{node}_c^3$

Readable
Reuse

functions

2 Types of Memories →

Heap

Global variable

int a = 500;

Access? → Poorabadr
→ Kisi bhi func ✓

Heap memory

int a = 500;
+10
510

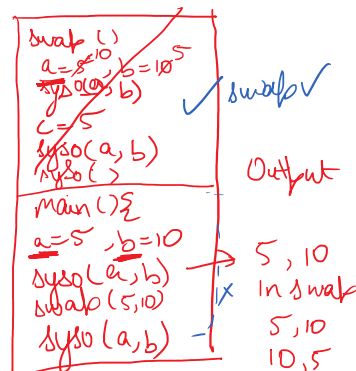

x Nahi volta

a^5, b^{10^5}

int c = a; ✓
a = b; ✓
b = c; ✓

- 1) Function call creates → Function frame
- 2) When "Kaam" is complete → All local variables are destroyed
- 3) When Stack is empty → Code Khatam

Swap

Heap

Global variable

int a = 5;
b = 10;

out swap

5, 10

Poor code ka ek hi a \Rightarrow Global Variable

```

public static void main(String[] args) {
    System.out.println("bro!");
    fun1();
    System.out.println("Bye!");
}

public static void fun1() {
    System.out.println("fun1 start");
    fun2();
    System.out.println("fun1 end");
}

public static void fun2() {
    System.out.println("fun2 start");
    fun3();
    System.out.println("fun2 end");
}

public static void fun3() {
    System.out.println("fun3 start");
    System.out.println("fun3 end");
}

```

Output :

bro!

fun1 start

fun2 start

fun3 start

fun3 end

fun2 end

fun1 end

Bye!

Print All Armstrong Numbers from (1-1000)
