$S(n) = O(n)$

Recursion → It is a problem solving technique.
 A function which calls itself.

↳ The task is to break any problem into smaller problems, assume that the smaller problem will work and do the corresponding self work.

Steps to be followed for solving recursion:

1) Identify the bigger problem, smaller problems

we can have multiple smaller problems

2) From all the smaller problems, choose the one which requires the least effort → the corresponding self work should be min.

3) Assume that the smaller problem works fine

4) Do the self work and create your solution.

5) # Base Case →iski smaller problem nahi hai
